6 star
energy rating

New sustainable housing laws.

A 6-star energy equivalence rating requirement for houses in Queensland has been implemented from 1st May 2010. To limit household energy use in heating and cooling, State Governments have introduced minimum construction requirements which will not only make your home more comfortable to live in, but will also provide you with ongoing savings on energy bills because your home will use less energy for artificial cooling and heating.

To gain this compliance, all of our new homes constructed will utilise some or all of the following to achieve a **6-star Energy Rating**:

- Walls R-Value of R1.0 (Sisalation)
- Ceiling R-Value of R2.5
- Heat Pump Hot Water System(250lt)
- Window Tinting
- 80% energy efficient Lighting
- Light coloured roofing
- Ceiling Fans
